

ABSTRACT

Improved and inexpensive pullulan free edible film formulations and methods for making the same are provided. The edible pullulan free film compositions comprise effective amounts of at least one film forming agent; at least one bulk filler agent; at least one plasticizing agent; and optionally at least one thickening agent. Medicaments and other additive agents can also be incorporated into the edible films. The present invention further provides methods of delivering a medicament, treating halitosis, treating xerostomia, and treating plaque or gingivitis using the pullulan free edible film compositions.
